

Your final matching report by Drax-CP22

for the period 1 April 2023 to 31 March 2024

Total consumed	Yearly matching	Production devices	Carbon impact
183.5 GWh	100.0 %	2	-27.2 kt

Technology breakdown

This breakdown shows how much of your consumption is matched by each asset type.

	Uk compliance year
■ Biomass	183.5 GWh 100.0% +0.0 excess
Total	183.5 GWh 100.0% +0.0 excess

Carbon content

Your carbon impact is the difference between location-based emissions of your local grid and the market-based emissions that come from your energy purchasing choices.

	Uk compliance year
Location-based (CO2eq)	27.2 kt
Market-based (CO2eq)	0.0 kt
Impact of sourcing strategy (CO2eq)	-27.2 kt

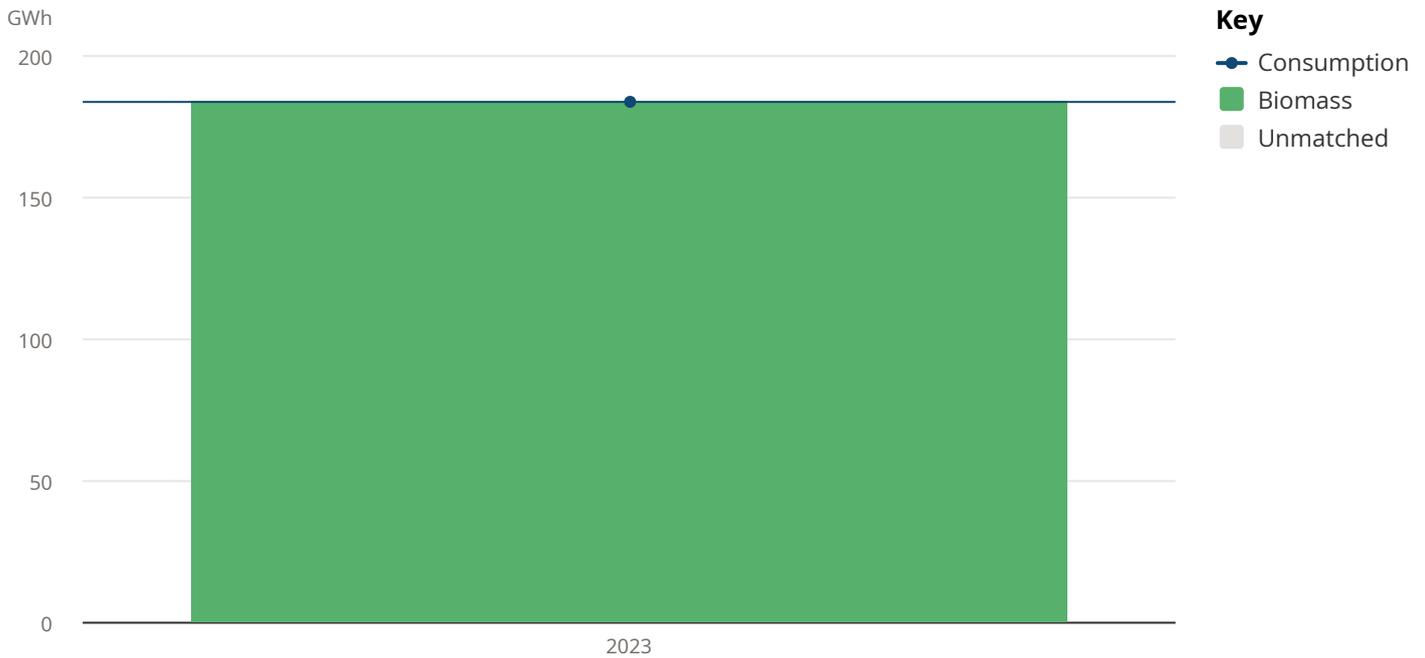

Production device breakdown

This breakdown displays the specific production devices that are matched to your consumption.

		Uk compliance year
1	Drax Power Station (REGO) Biomass	106.6 GWh 58.1% +0.0 excess
2	Lynemouth Power Ltd Biomass	76.9 GWh 41.9% +0.0 excess

Matching over the report period / Uk compliance year matching

This chart shows how your consumption is matched with production over the period 1 April 2023 to 31 March 2024, using a UK compliance year time definition.

Cancelled certificates

The following certificates have been allocated to your consumption.

Registry ID	Production device	Technology	Country	Volume
G01821BWEN	Drax Power Station (REGO)	■ Biomass	GB	15447.0 MWh
Certificate IDs				Period
